

High Power Spotlight

Order our “High Power Lab Kit” in May

The kit includes:

One high power **SL-Narrow Spot** with 13° beam angle or a high power **SL-Wide Spot** with 26° beam angle, choose the LED color from white, red or infrared

One 2m connection cable M12 with open end

High Power Lab Kit price: 150 EUR ~~289 EUR~~

Add to the kit:

One easy to mount articulated light mount for 29 EUR

For the extra bright spotlights of the High Power HP SL-Series, stronger LEDs are used compared to the standard spots. These provide about 4 times more power. In addition, there is a small lens on every LED, which focuses the light to a smaller beam angle. This gives additional brightness, especially for larger distances.

NEW: Defined beam angle

A lens at the housings light exit provides a defined opening angle of 13° or 26° degrees. Let the light distribution of your spot light meet the requirements of your application. With the articulated light holder, the light is on the desired location in no time.

The offer includes one high power spot (narrow or wide) in the LED color white, red or infrared. Each light will be delivered with the integrated LED controller (-s) with four operation modes and a 2m M12 connection cable with open wire end. The light mount is an optional add on. This offer is valid for one unit/set per customer so everybody can benefit from this offer. Offer is valid from May 01, 2021 until May 31, 2021 .
